Internet of Things
Development Platform

The Internet of Things (IOT) is one of the booming concepts in technologies nowadays. However due to many reasons that will be discussed later on, there's a lack of IOT applications mainly due the infeasibility of developing ones with ease.

In this document we talk about our project IOTA (Internet of Things Application), which is an Internet of Things Development Platform that allows the user to develop IOT applications and track them on different devices with ease and simplicity.

The purpose of this document is introduce the readers to our project and take them through the different phases that we went through to complete it, from the early inception stage until the final implementation and testing phases.
